Deviation Report

Product: API-Compound-X
Batch Number: API-240617
Site: Bangalore API Manufacturing Unit
Department: Production
Manufacturing Stage: Reaction

During manufacturing of API-Compound-X batch API-240617, the reactor temperature exceeded the approved process range of 78–82°C.

The actual reactor temperature reached 86°C and remained above the approved range for approximately 12 minutes.

The event occurred in Reactor R-204.

The operator identified the temperature excursion, stopped the heating step, and notified the production supervisor and QA.

The deviation may have an impact on product quality and process consistency. QA review is required to determine the final impact and classification.
